

FOSS

FossCare™

Preventive Maintenance Protocol**NIRS™ DS2500 / DS2500 F**

PM interval: 12 months	No. of samples analysed: 4820.
PM kit (P/N): N/A	Date: 01.08.2017.

Introduction

A maintenance protocol provides a systematic and functional means of maintaining a specific instrument type. The certified performed PM interval depends on the operational conditions, and is based on our extensive experience and knowledge of manufacturing and maintaining analytical instruments.

Apart from sample throughput, the environmental conditions also need to be taken into account. Demanding environments, such as high ambient temperature, humidity, dirtiness etc can measurably shorten component lifetime and also the maintenance and component replacement intervals.

For information about part numbers and instructions please refer to the spare parts manual, the user manual and the service manual.
